**1 RaceTrack: efficient detection of data race conditions via adaptive tracking**

Yuan Yu, Tom Rodeheffer, Wei Chen

 October 2005 **ACM SIGOPS Operating Systems Review**, Proceedings of the twentieth ACM symposium on Operating systems principles SOSP '05, Volume 39 Issue 5

Publisher: ACM Press

Full text available: pdf(321.34 KB)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#), [index terms](#)

Bugs due to data races in multithreaded programs often exhibit non-deterministic symptoms and are notoriously difficult to find. This paper describes RaceTrack, a dynamic race detection tool that tracks the actions of a program and reports a warning whenever a suspicious pattern of activity has been observed. RaceTrack uses a novel hybrid detection algorithm and employs an adaptive approach that automatically directs more effort to areas that are more suspicious, thus providing more accurate war ...

**4 Soft timers: efficient microsecond software timer support for network processing**

Mohit Aron, Peter Druschel

December 1999 **ACM SIGOPS Operating Systems Review**, Proceedings of the

**seventeenth ACM symposium on Operating systems principles SOSP**

'99, Volume 33 Issue 5

**Publisher:** ACM PressFull text available:  pdf(1.65 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#), [index terms](#)

This paper proposes and evaluates soft timers, a new operating system facility that allows the efficient scheduling of software events at a granularity down to tens of microseconds. Soft timers can be used to avoid interrupts and reduce context switches associated with network processing without sacrificing low communication delays. More specifically, soft timers enable transport protocols like TCP to efficiently perform rate-based clocking of packet transmissions. Experiments show that rate-base ...

**5** HIP: hybrid interrupt-polling for the network interface

Constantinos Dovrolis, Brad Thayer, Parameswaran Ramanathan

October 2001 **ACM SIGOPS Operating Systems Review**, Volume 35 Issue 4**Publisher:** ACM PressFull text available:  pdf(989.34 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#), [index terms](#)

The standard way to notify the processor of a network event, such as the arrival or transmission of a packet, is through interrupts. Interrupts are more effective than polling, in terms of the per packet send/receive latency. Interrupts, however, incur a high overhead both during and after the interrupt handling, because modern superscalar processors use long pipelines, out-of-order and speculative execution, and multi-level memory systems, all of which tend to increase the interrupt overhead in ...

**6** Thoth, a portable real-time operating system

David R. Cheriton, Michael A. Malcolm, Lawrence S. Melen, Gary R. Sager

February 1979 **Communications of the ACM**, Volume 22 Issue 2**Publisher:** ACM PressFull text available:  pdf(1.23 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citings](#)

Thoth is a real-time operating system which is designed to be portable over a large set of machines. It is currently running on two minicomputers with quite different architectures. Both the system and application programs which use it are written in a high-level language. Because the system is implemented by the same software on different hardware, it has the same interface to user programs. Hence, application programs which use Thoth are highly portable. Thoth encourages structuring progr ...

The objective of this course is to provide an introduction to the issues that must be considered when building high-fidelity 3D engaging shared virtual environments. The principles of human perception guide important development of algorithms and techniques in collaboration, graphical, auditory, and haptic rendering. We aim to show how human perception is exploited to achieve realism in high fidelity environments within the constraints of available finite computational resources. In this course w ...

We present a new method for dynamically detecting potential data races in multithreaded programs. Our method improves on the state of the art in accuracy, in usability, and in overhead. We improve accuracy by combining two previously known race detection techniques -- *lockset-based detection* and *happens-before-based detection* -- to obtain fewer false positives than lockset-based detection alone. We enhance usability by reporting more information about detected races than any previous dyna ...

13 The embedded machine: predictable, portable real-time code

Thomas A. Henzinger, Christoph M. Kirsch

May 2002 **ACM SIGPLAN Notices , Proceedings of the ACM SIGPLAN 2002 Conference on Programming language design and implementation PLDI '02**, Volume 37

Issue 5

**Publisher:** ACM Press

Full text available: pdf(223.85 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Embedded Machine is a virtual machine that mediates in real time the interaction between software processes and physical processes. It separates the compilation of embedded programs into two phases. The first, platform-independent compiler phase generates E code (code executed by the Embedded Machine), which supervises the timing ---not the scheduling--- of application tasks relative to external events, such as clock ticks and sensor interrupts. E~code is portable and exhibits, given an input ...

**Keywords:** real time, virtual machine

14 Networked sensor energy management: A modular power-aware microsensor with >1000X dynamic power range

Brian Schott, Michael Bajura, Joe Czarnaski, Jaroslav Flidr, Tam Tho, Li Wang

April 2005 **Proceedings of the 4th international symposium on Information processing in sensor networks IPSN '05**

**Publisher:** IEEE Press

Full text available: pdf(621.54 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We introduce a power-aware microsensor architecture supporting a wide operational power range (from <1mW to >10W). The platform consists of a family of modules that follow a common set of design principles. Each module includes a local power microcontroller, power switches, and isolation switches to enable independent power-down control of modules and module subsystems. Processing resources are scaled appropriately on each module for their role in the collective system. Hard real-time func ...

**Keywords:** component, low power embedded systems, microsenors, power aware computing

15 The application accelerator illustration system

Michael S. Miller, Howard Cunningham, Chan Lee, Steven R. Vegdahl

June 1986 **ACM SIGPLAN Notices , Conference proceedings on Object-oriented programming systems, languages and applications OOPSLA '86**, Volume 21

Issue 11

**Publisher:** ACM Press

Full text available: pdf(629.30 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Application Accelerator Illustration System is a prototype of an integrated CAD environment that supports the development of application-specific integrated circuits. The current implementation features a hardware description language compiler, timing analyzer, functional simulator, waveform tracer, and data path place and route facility. The system is implemented in Smalltalk-80™.

**16** Architecture of the IBM system/370

Richard P. Case, Andris Padegs

January 1978 **Communications of the ACM**, Volume 21 Issue 1**Publisher:** ACM Press

Full text available: pdf(2.78 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

This paper discusses the design considerations for the architectural extensions that distinguish System/370 from System/360. It comments on some experiences with the original objectives for System/360 and on the efforts to achieve them, and it describes the reasons and objectives for extending the architecture. It covers virtual storage, program control, data-manipulation instructions, timing facilities, multiprocessing, debugging and monitoring, error handling, and input/output operations. ...

**18** Research tools: MiNT-m: an autonomous mobile wireless experimentation platform

Pradipta De, Ashish Raniwala, Rupa Krishnan, Krishna Tatavarthi, Jatan Modi, Nadeem Ahmed Syed, Srikant Sharma, Tzi-cker Chiueh

June 2006 **Proceedings of the 4th international conference on Mobile systems, applications and services MobiSys 2006****Publisher:** ACM Press

Full text available: pdf(803.48 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Limited fidelity of software-based wireless network simulations has prompted many researchers to build testbeds for developing and evaluating their wireless protocols and mobile applications. Since most testbeds are tailored to the needs of specific research projects, they cannot be easily reused for other research projects that may have different requirements on physical topology, radio channel characteristics or mobility pattern. In this paper, we describe the design, implementation and evaluation ...

**Keywords:** autonomous operation, mobility, topology reconfiguration, wireless experimentation platform, wireless testbed

**19** A comparative study of environments for database system implementation

M. Teresa Suarez Fernandez, H. Rex Hartson

August 1978 **ACM SIGMINI Newsletter , Proceedings of the first SIGMINI symposium on Small systems SIGMINI '78**, Volume 4 Issue 4

**Publisher:** ACM Press

Full text available:  pdf(742.67 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Two specific environments for implementation of experimental DataBase Management Systems (DBMS) are compared, especially in light of performance measurement: IBM 370 and HP-2100A. The HP-2100A was selected for a skeletal implementation to study performance parameters further. The DBMS structure, some performance results, and several difficulties encountered are described. The HP-2100A minicomputer did provide "hands-on" experience and more direct control to customize disk access ...

## 20 [Collision detection and proximity queries](#)

Sunil Hadap, Dave Eberle, Pascal Volino, Ming C. Lin, Stephane Redon, Christer Ericson  
August 2004 **ACM SIGGRAPH 2004 Course Notes SIGGRAPH '04**

**Publisher:** ACM Press

Full text available:  pdf(11.22 MB) Additional Information: [full citation](#), [abstract](#)

This course will primarily cover widely accepted and proved methodologies in collision detection. In addition more advanced or recent topics such as continuous collision detection, ADFs, and using graphics hardware will be introduced. When appropriate the methods discussed will be tied to familiar applications such as rigid body and cloth simulation, and will be compared. The course is a good overview for those developing applications in physically based modeling, VR, haptics, and robotics.
